**I. LANDFILL BUSINESS:**

The Board was concerned with several things with regards to the design of the cut-off trench. They were as follows:

- 1) depth of trench,
- 2) location of trench,
- 3) whether field changes could be made without creating a problem.

There was an error in the invert elevations of the perforated pipe. He said his intent was to have the trench at 5' max. It was discussed that the trench could be closer to the edge of pavement to avoid damage to the trees and stone wall. Field changes could be made to the approved plan, and an as-built plan would be needed.

Richard was hoping to get the revised plan back to the Board sometime next week July 15<sup>th</sup>. The Board will review prior to submitting to DEP for approval.
